

Call for Special Sessions and Mini Workshops

Members of our community are invited to contribute to the shaping of the GSG 2022 program by submitting proposals for the organization of Special Sessions and/or Mini Workshops.

Special Sessions will be complementary to the [12 General Sessions \(Themes\) of GSG 2022](#), highlighting trends and emerging topics and stimulating focused discussions. Proposals will be evaluated by both the organizing and scientific committees. In case of largely overlapping proposals, the committees retain the right to propose merging.

Mini Workshops are defined as brief (half-day, preceding the main conference) intensive educational programs for a small group of people. They can include a series of specialized lectures on a hot and/or rapidly emerging research topic or hands on activities (e.g., demonstration and practice on specialized software, instrument, tools, etc). We strongly encourage the proposal of mini workshops targeting to students and young scientists. Prospective organizers should be accurate in the description of the organizational needs of the proposed mini workshop. GSG 2022 Organizing Committee will evaluate pertinent proposals based on their timeliness and expected impact, as well as their feasibility in terms of organization.

How to submit

Prospective organizers should submit their proposals using the appropriate template file ([Template for Special Session](#) or [Template for Mini Workshop](#)) to: **gsg2022@upatras.gr**.

Deadline for submission: September 10, 2021
